- **Knowledge of UX/UI design principles.**
- **Ability to work collaboratively in a team environment.**
-

Language Skills:

- **Arabic: Native.**
- **English: Very Good.**

Projects:

Luxuria

I built Luxuria, an online store using React, Redux, Tailwind, Firebase, and API integration. React, a popular JavaScript library, was used to create dynamic and interactive components, while Redux managed the application's state, ensuring data consistency across the website. I leveraged my skills to create a responsive and modern design with Tailwind. Firebase was used to handle authentication.

Hulu-clone

Hulu Clone is a React and Next.js web app with server-side rendering, lazy loading, code splitting, caching, minification, and compression. It features popular movies and filtering by genre and rating. The app uses TMDb API .

Resturant-menu

Created a restaurant menu using React and sorting by category with React Hooks. Demonstrated proficiency in React and state management with Hooks.

Youtube-clone

A YouTube clone project would involve creating a web application that mimics the design of the popular video-sharing platform. Using HTML and CSS , fontawesome library for the icons.

Simple landing page

A simple landing page with React and Tailwind CSS .

Changeable landing page

Dynamic landing page with changeable backgrounds using HTML, CSS, and JS. delivering a visually appealing website with seamless background transitions.

Photo-Editor

A photo editor web app using HTML, CSS, and JS, with filters and shape-changing features. Include upload and download to the image.
